## How to install SSL Certificate on iPad

How to manually install certificate/profile on IOS/iPad without MDM

1. Download the certificate on a laptop and email it to yourself.

2. Click/tap on the attached certificate on the mobile device and select 'Install'

Cancel	Install Profile	Install
StPaulFilter		
Signed by StPaulFilter Not Verified		
Contains Certificate		
More Details		>

3. Continue through the install process until you reach the 'Certificate Installed' window

## 4. Confirm installation under General/Profiles/Configuration Profiles (or Device Management)
